

Nginx - Common Exploits Prevention

Common Exploits Prevention adalah upaya untuk **mencegah eksploitasi umum** yang sering digunakan oleh peretas untuk menyerang sistem.

Berikut Konfigurasinya :

```
set $block_common_exploits 0;

if ($query_string ~ "(<|%3C).*script.*(>|%3E)") {
    set $block_common_exploits 1;
}
if ($query_string ~ "GLOBALS(=|\\|\\%{0,2})") {
    set $block_common_exploits 1;
}
if ($query_string ~ "_REQUEST(=|\\|\\%{0,2})") {
    set $block_common_exploits 1;
}
if ($query_string ~ "proc/self/envIRON") {
    set $block_common_exploits 1;
}
if ($query_string ~ "mosConfig_[a-zA-Z]{1,21}(=|\\%3D)") {
    set $block_common_exploits 1;
}
if ($query_string ~ "base64_(en|de)code(\\.\\*)") {
    set $block_common_exploits 1;
}
if ($block_common_exploits = 1) {
    return 403;
}
```
